Carbon Foot Print

What is carbon foot print?

Most energy produced in the world is done by burning fossil fuels, such as petroleum and gas.

What is carbon foot print?

Your carbon foot print is the total amount of CO₂ and methane gas you release into the environment by consuming energy.

Save energy units

Using paper, for example, adds to your carbon footprint because it takes 15 units of energy to make paper from a plant.

Save energy units

A plant takes 5 units of energy to grow into tree.

5 units of energy

Save energy units

It takes 4 units of energy to cut the tree and transport it to the paper mill.

1 unit of energy

Save energy units

It takes 6 units of energy to create paper in the mill.

Save energy units

So next time, don't throw your books into the dustbin.
Instead, you can give them for recycling.

Save electricity

If you forget to switch off a light or a computer when you leave home, you are adding to your carbon footprint.

Tip

If you are going to a friend's house close by, convince your parents to walk with you instead of taking a car or taxi.

WHAT IS YOUR Ecological Footprint?

How many planets do we need if everybody lives like you?

When is your personal Overshoot Day?
