

ΘΕΜΑ 1. ΚΑΤΑΝΟΗΣΗ ΓΡΑΠΤΟΥ ΛΟΓΟΥ

Read the text and decide if each statement (1-10) is True (A) or False (B).

On March 10 1876, in Boston, Massachusetts, Alexander Graham Bell invented the telephone. Speaking through the machine to his assistant Thomas A. Watson, who was in the next room, Bell said these famous first words: "Mr. Watson come here, I want to see you". "Telephone" comes from the Greek word "tele", meaning "from far away", and "phone", meaning "voice" or "voice sound".

Generally, a telephone is any machine that carries sound over distance. People have used smoke signals, mirrors, jungle drums, pigeons to get a message from one point to another. But a real telephone could not be invented until the electrical age began. The electrical rules needed to build a telephone were known in 1831, but the idea of sending speech electrically was thought of in 1854. It wasn't until 22 years later, in 1876, that the idea became a fact. Bell's success with the telephone came as a direct result of his attempts to improve the telegraph. This had been the traditional means of communication for some 50 years, but, with its Morse code, it was limited to receiving and sending one message at a time. The telephone is a shared achievement among many inventors, but Bell's knowledge of the nature of sound and his understanding of music made it easy for him to think of the possibility of sending many messages at the same time.
